

# AViCHECK

## ✓ What is AviCheck™?

AviCheck is a completely mobile check-in service. The system provides airlines and airport operators with a new passenger service option without increasing the number of check-in desks. AviCheck can also be used to provide a premium service for business or first class passengers, avoiding the need to visit a check-in desk completely.

AviCheck consists of a lightweight wireless connected device and small boarding pass printer that enables any authorized staff to be deployed for example, at peak times to assist in reducing queuing times for passengers or to provide additional check-in facilities when the number of desks are limited.

## ✓ AviCheck Key Benefits

### AviCheck Enables

- ✓ Passengers to be checked-in and issued with a boarding pass away from existing static check-in desks
- ✓ Congestion reduction in departure halls
- ✓ Premier Service to assist high-value customers minimise check-in time
- ✓ Compatibility with existing web check-in and kiosk services
- ✓ Passengers to spend less time queuing and more time in retail outlets

### Benefits for IT departments

- ✓ Industry standard based hardware and software
- ✓ Secure build using embedded XP
- ✓ Secure VPN access to host systems

### Benefits for Check-in Agents

- ✓ The ability to rapidly respond to congestion and provide an improved service
- ✓ Additional capacity at locations where there is normally minimal check-in capability (e.g. gates)
- ✓ Independence from airport infrastructure and therefore provides additional resilience

AviCheck is a .NET software solution that runs on the latest mobile PC hardware. Via an easy to use GUI, AviCheck will enable connection to any DCS host over virtually any available network connection. It is a unique full check-in solution that provides:

1. Real time wireless access to any DCS
2. Simple user friendly interface, with as much or as little functionality as required
3. Boarding card printing
4. Baggage information capture and remote bag-tag printing if required

### AviCheck Key Features

The solution has been specifically designed to help airlines and airports encountering problems such as:

- Congestion at peak times.
- Insufficient space for more check-in desks.
- High structural costs associated with providing more fixed desks.
- Cost or space constraints associated with self-service kiosks.
- Lack of facilities to cope with flight changes/cancellations, particularly air-side.
